Hung, Yung-Fan

A student with great zeal towards architecture. Passionating about creating designs that are human-centered, which as well make positive impacts on people's lives. Participated in Bamboo Construction Project during university so that find great joy in handmade models, which also makes me realize the importance of blending human environment with architecture can contribute even meaningful value. Wish to keep reinventing myself and stepping out of my comfort zone, so as to help make a difference to human lives through architecture in whichever way and extent possible.

Education

National Taiwan University of Science and Technology	Taipei, Taiwan
Bachelor of Architecture	Sep 2020 - Jun 2024
École d'architecture de la ville & des territoires Paris-Est	Champs-sur-Marne, France
Programme Erasmus+	Mar 2025 - Jun 2025

Internship

Lipsky+Rollet architecture	Paris, France
· ZAC IVRY Confluence / Housing	Sep 2024 - Feb 2025
· Plateau de saclay / Student residence	
· Conducted construction document reviews and on-site coordination	
· Supported VISA (design validation) submissions	
· Produced architectural sections, diagrams, and presentation drawings	
· Developed 3D models to support design development	
Bio-Architecture Formosana	Taipei, Taiwan
· TaiSugar Circular Village / Housing	Jul 2022 - Sep 2022
· Kinmen County Central Library and Art Museum / Culture (Competition)	
· Designed structural trusses and developed 3D models for project visualization	
· Produced architectural sections, diagrams, and elevation drawings	
· Produced final competition model for presentation and design review	
· Developed wind rose diagrams for environmental analysis	
· Created interior renderings for design presentations	

Achievement

· MOE Overseas Study Scholarship / Recipient (France)	2024
· The National Architects Association Students Contest / Shortlisted	2023
· ISARCH Architecture Awards / Finalist	2023
· Bamboo Forest Iron Cenozoic Exhibition / Gold Award	2022
· Tellus Home Design Competition / Shortlisted	2021

Workshop & Experience

· ENSA Paris-Est / Atelier Exhibition Participant	2025
· NTUST / Thesis Design Exhibition Participant	2024
· East Asian Universities Urban & Architectural Design Workshop / Participant	2023
· Accessible Facilities & Equipment Design Inspection Training / Certified	2022
· USR Bamboo Construction Project / Team Member	2021

Technical Skills

Modeling	Autocad, Archicad, Revit, Sketchup, Rhino	Rendering	Lumion
Analysis	Climate consultant, Climate studio	Graphic	Illustrator, Photoshop

Languages

· English - Fluent	· Mandarin - Native	· French - Basic

01

小城故巷多 Small Town, Old Lanes.

「編織城市舊紋理，
重建人性化的都市空間。」

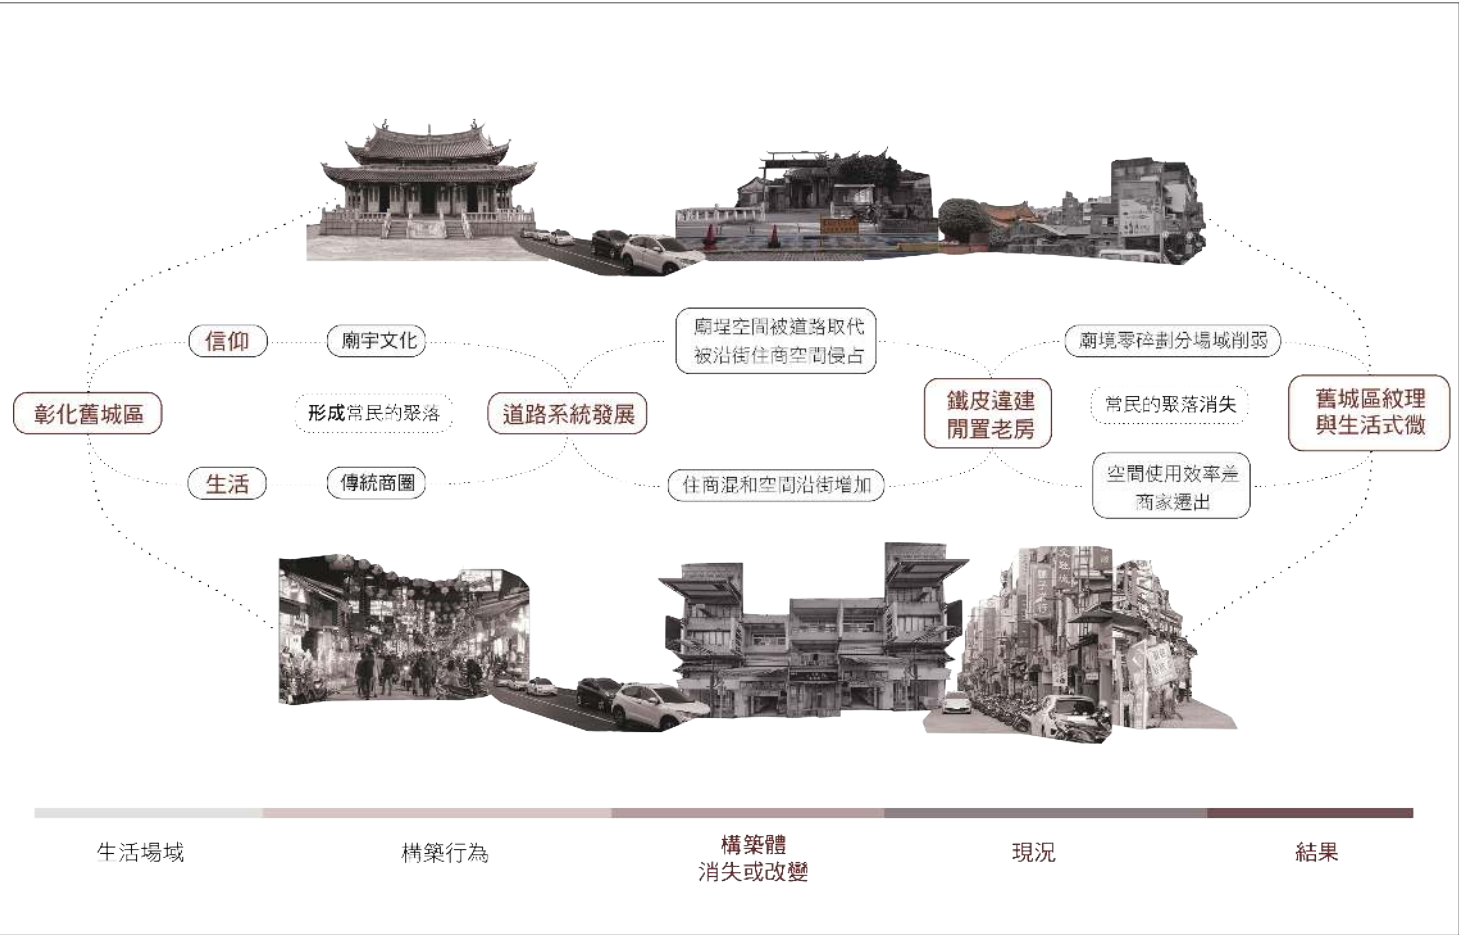

從市鎮發展型態的角度來看，早期彰化應該是在幾個區塊中順著廟宇的興建和市集的產生同時展開的。也因此狹小巷道隨著各宮廟應運而生並串接在一起。依 Edmond Beckon 在 Design of City 一書中所述，文藝復興前歐洲小城鎮多半為 Compression 擠壓式的型態，是不規則但產生出十分人性化的空間；這樣的描述對彰化老城非常貼切。後期較新的都市計劃從鐵路車站和交通運輸脈絡的方便性出發，由寬廣直通的道路取代舊有的不規則，切割出來新的幾何型態和舊的巷弄交織出豐富多元並充滿趣味性的現象。這樣的交錯是一種對話；而追尋、探討、找出其間新的生命與次序是這一次設計的挑戰。

Old Lanes.

Changhua

現況與問題

STEP 1

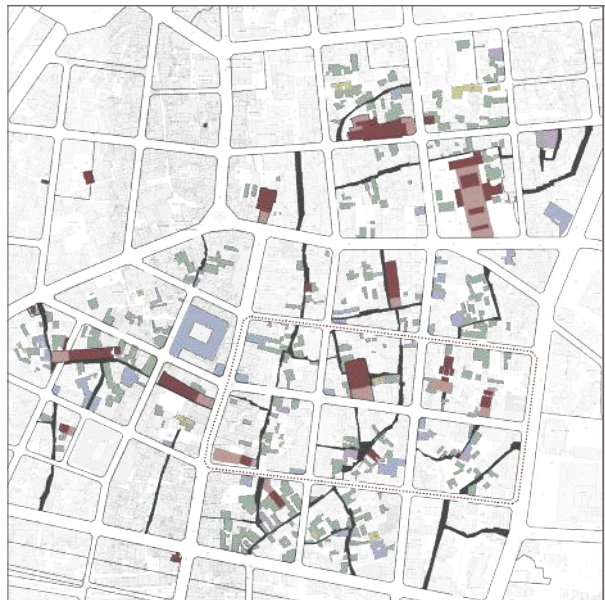

找出廟宇位置與巷弄紋理

STEP 4

並延伸廟埕空間
在馬路上延伸巷弄紋理，形成新的鋪面，

STEP 2

慮拆除
找出巷弄紋理上的鐵皮、廢棄磚房，可考

STEP 5

重建老舊、破損廟宇門牌雨遮棚

STEP 3

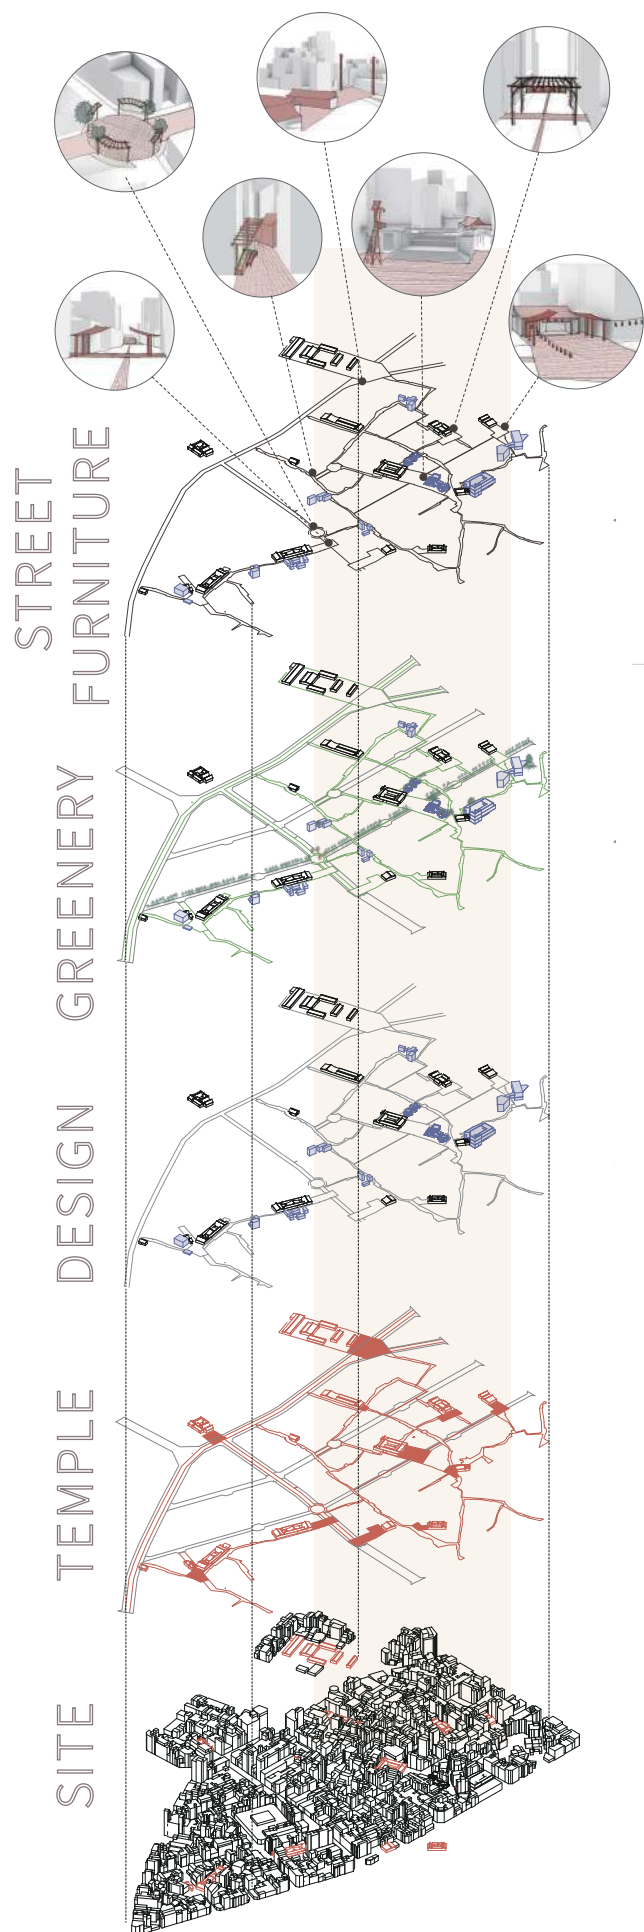

意義
找出基地與周遭環境的關聯性、歷史

STEP 6

與綠植
規劃綠化系統，沿著巷弄置入街道家具

廟宇遮棚

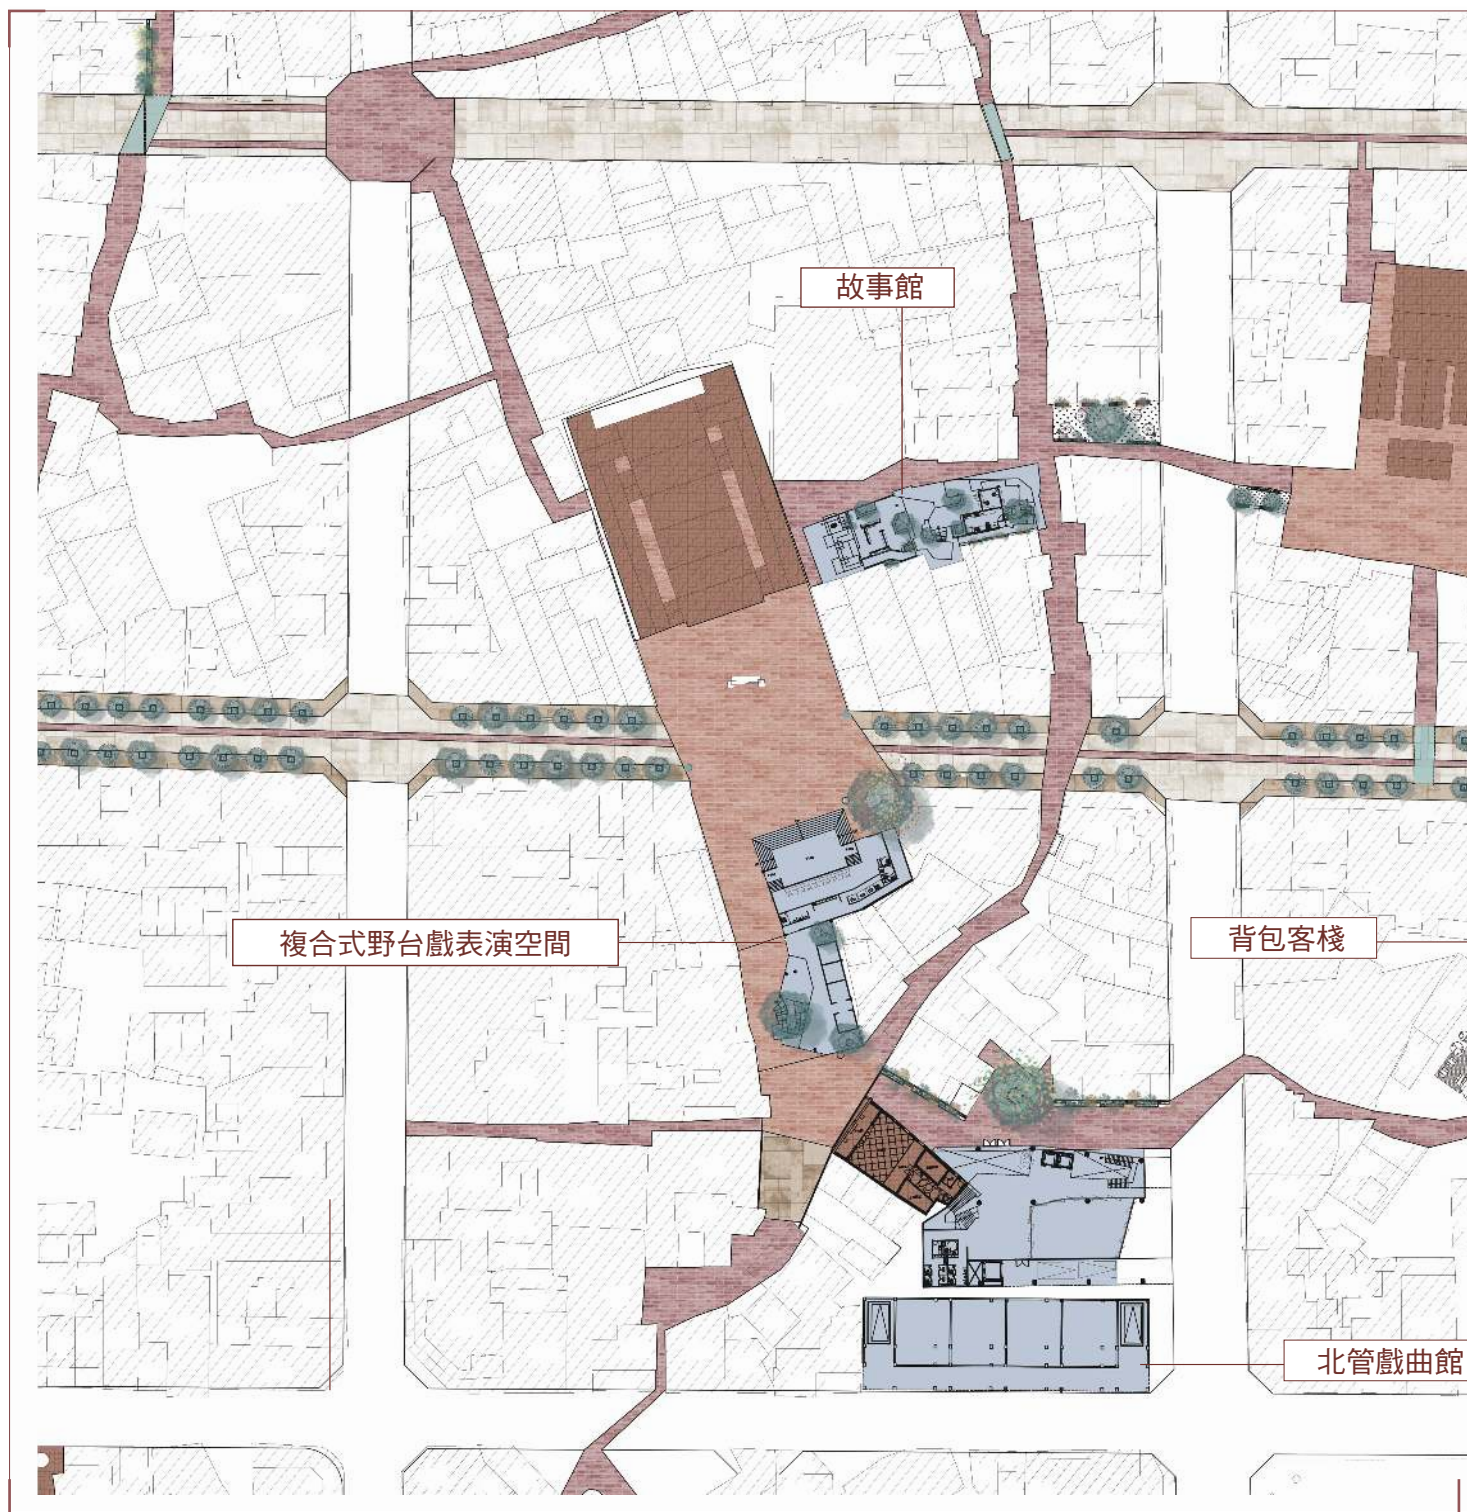

十字交會路口

從永樂街商圈展開的巷弄系統發展設計，再配合周遭廟境空間決定出適合發展的機能空間，分別為：位於慶安宮與集樂軒周遭的複合野台戲表演空間、北管戲曲館、文化故事館，以及位於天后宮對面的背包客棧，期望能夠透過這散佈在廟境與巷弄之間的設計，重新連結當地居民的生活聚落。

Hybrid International Youth Hostel

X

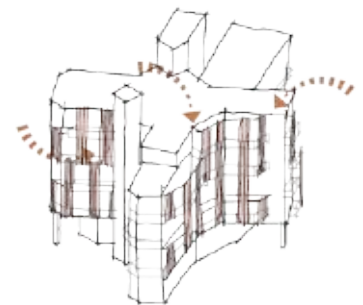

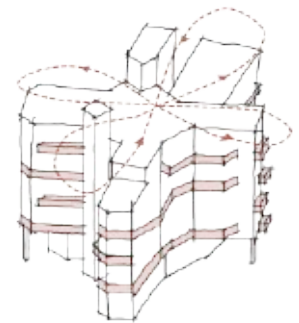

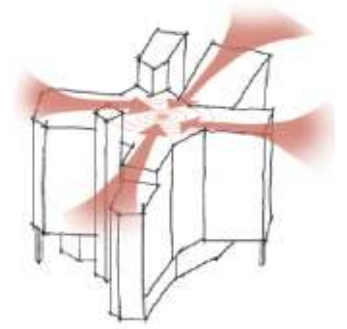

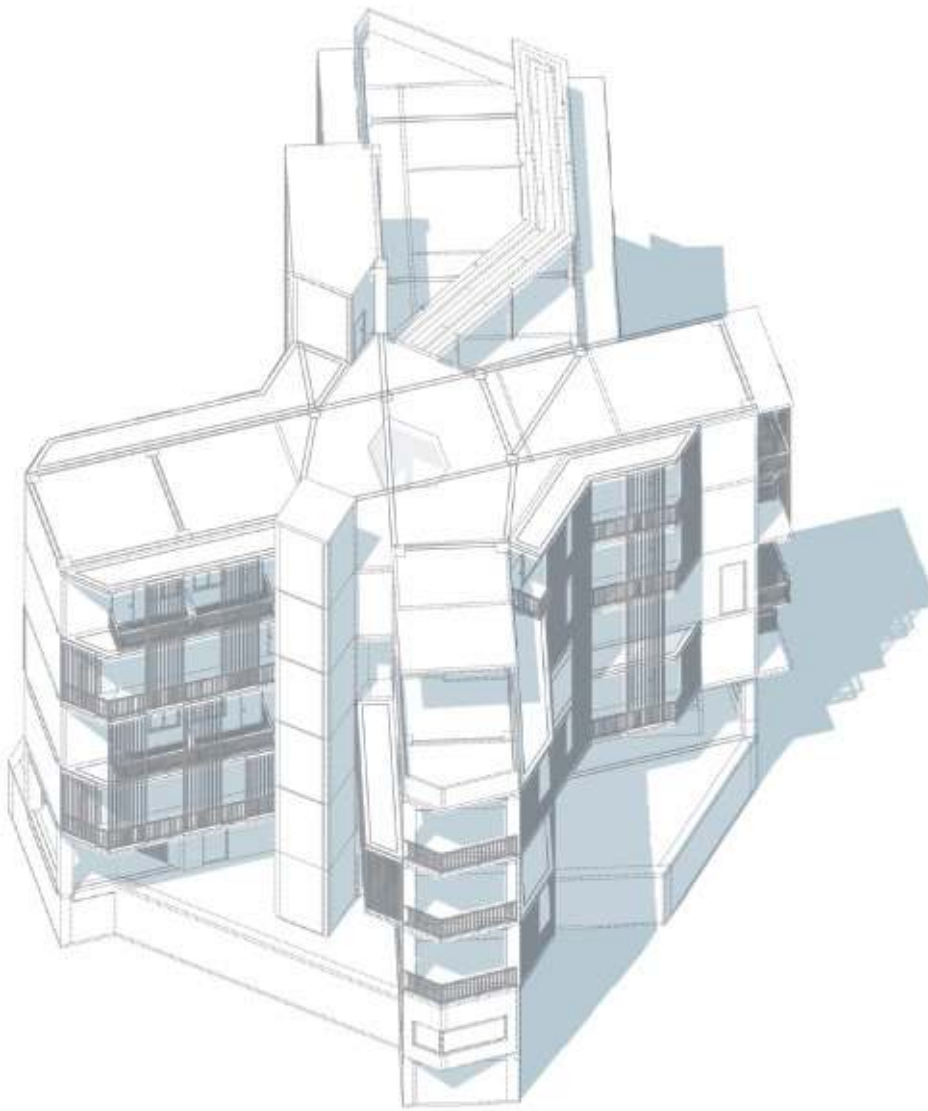

House

Chifeng str., a street with classic beauty near our site, which is also called 『歹鐵仔街』 (antiquated-ironware street) , I used the idea of industrial elements to create my concept, as a wrench and screw go together,I want my design to unite public, historical and local characteristics values. I hope my building to unite this characteristics and pull them closer for the hostel guests to experience them deeply.

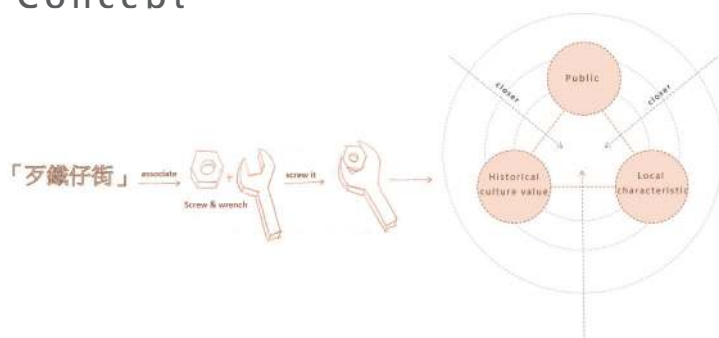

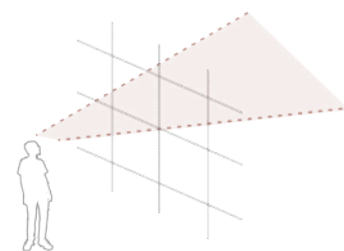

Massing development

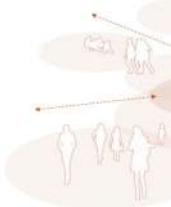

Concept

Associate it as screw & wrench and screw it !
Be closer to public, historical culture value,
local characteristic

Transparent & Light

Conver

Site analysis

X-shaped geometry

- Generates a connective central space
- Circulation keeps diverging & converging

Traffic analysis

- Songshan-Xindian Line
- Tamsui-Xinyi Line
- Linear park
- Public Bicycle System
- Zhongshan, Shuanglian Station
- Zhongshan Station
- Bus stop

Balcony and corridor staggering

- Build up traffic flow between each space
- Allow wind and sunlight inside the building

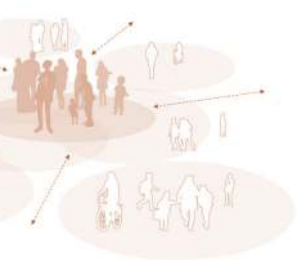

Hostel distribution

- Hostel
- Hostel offer breakfast

The world is lacking an X space - Dinner Theater

聲波煮場秀

In this design, the site will be defined as a complex space consisting of a music square, restaurants, and theaters. Through the "sonic seasoning" method, music and food will be fused together, allowing the public to experience the space in rich and diverse forms. This space will extend the leisurely pace of life in Taichung and integrate the food culture of breweries and Taichung's market. It will also enhance the dining functions within the park, using food, music, and performances to interact and season, creating an interface space for the four surrounding areas of the site. At last, we hope to generate resonance that stimulates all five senses, and enjoying the perfect harmony of music and cuisine in the right rhythm, melody, and space.

Gap

About X space

Entering from the park in Taiwan

The one which publicly operated among the five major cultural parks and regarded as "The center for architecture, design, and art exhibitions in Taiwan."

International Creative Exchange Platform

Taichung Cultural & Creative Industrial Park

Cultural Heritage Site

Revitalize old historic buildings and breathe new life into the brewery culture

Business model

Emphasizing creative industries and cultural assets, with a secondary focus on commercial aspects

Entering through the culture surrounding the site

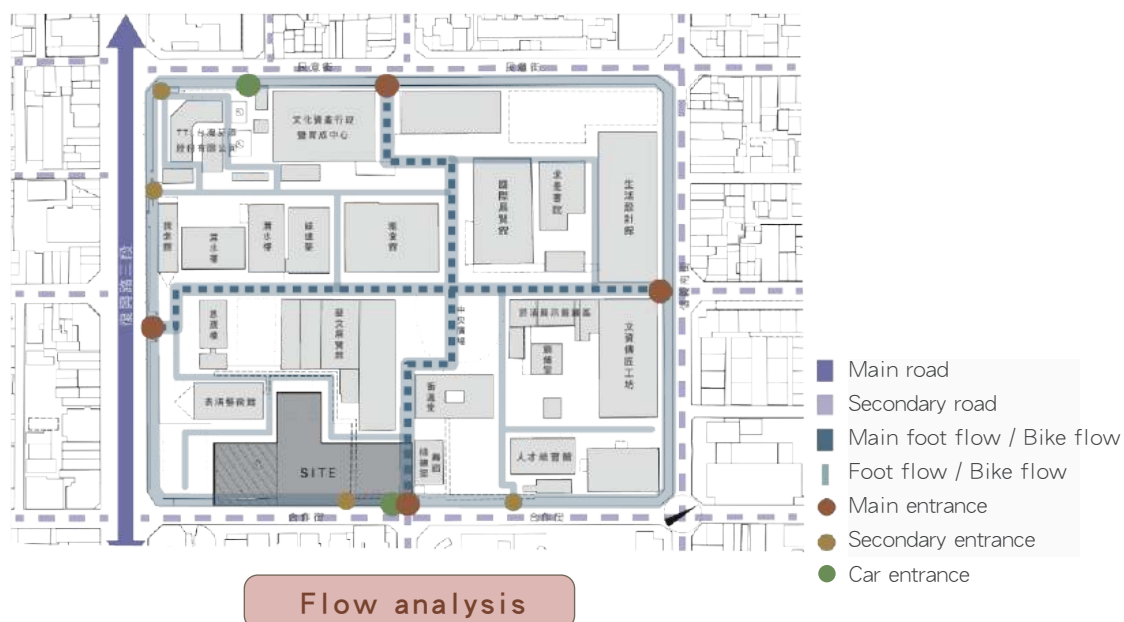

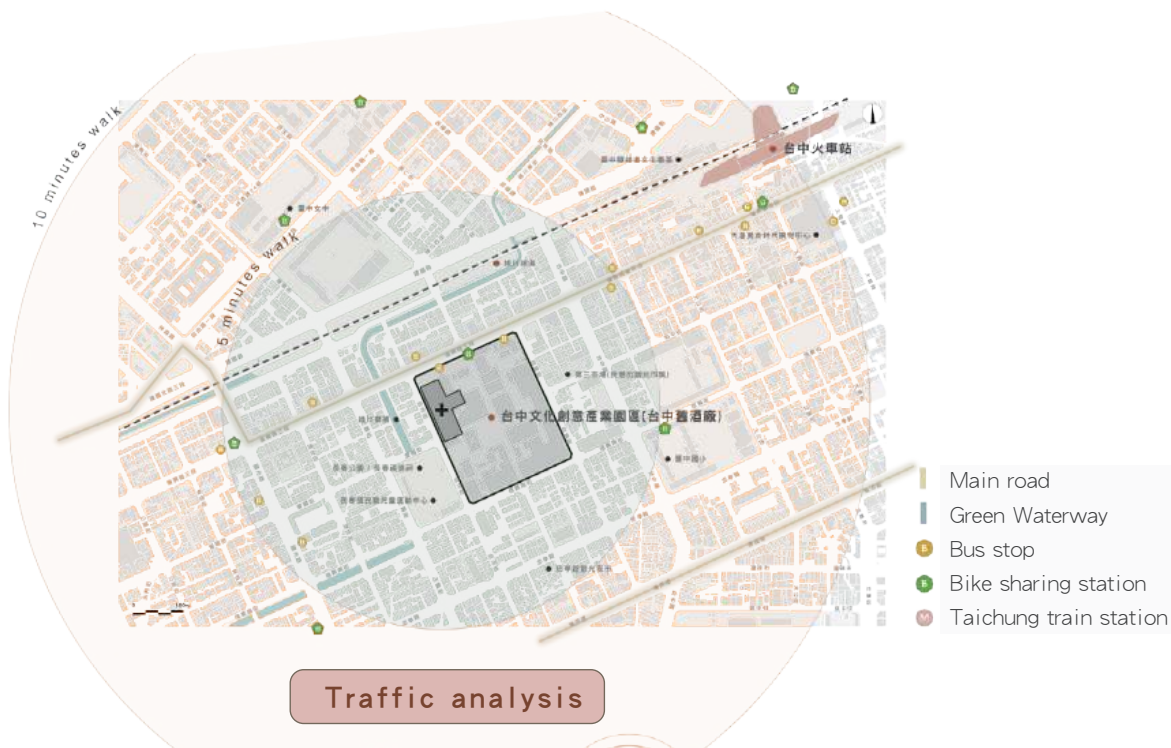

Concept

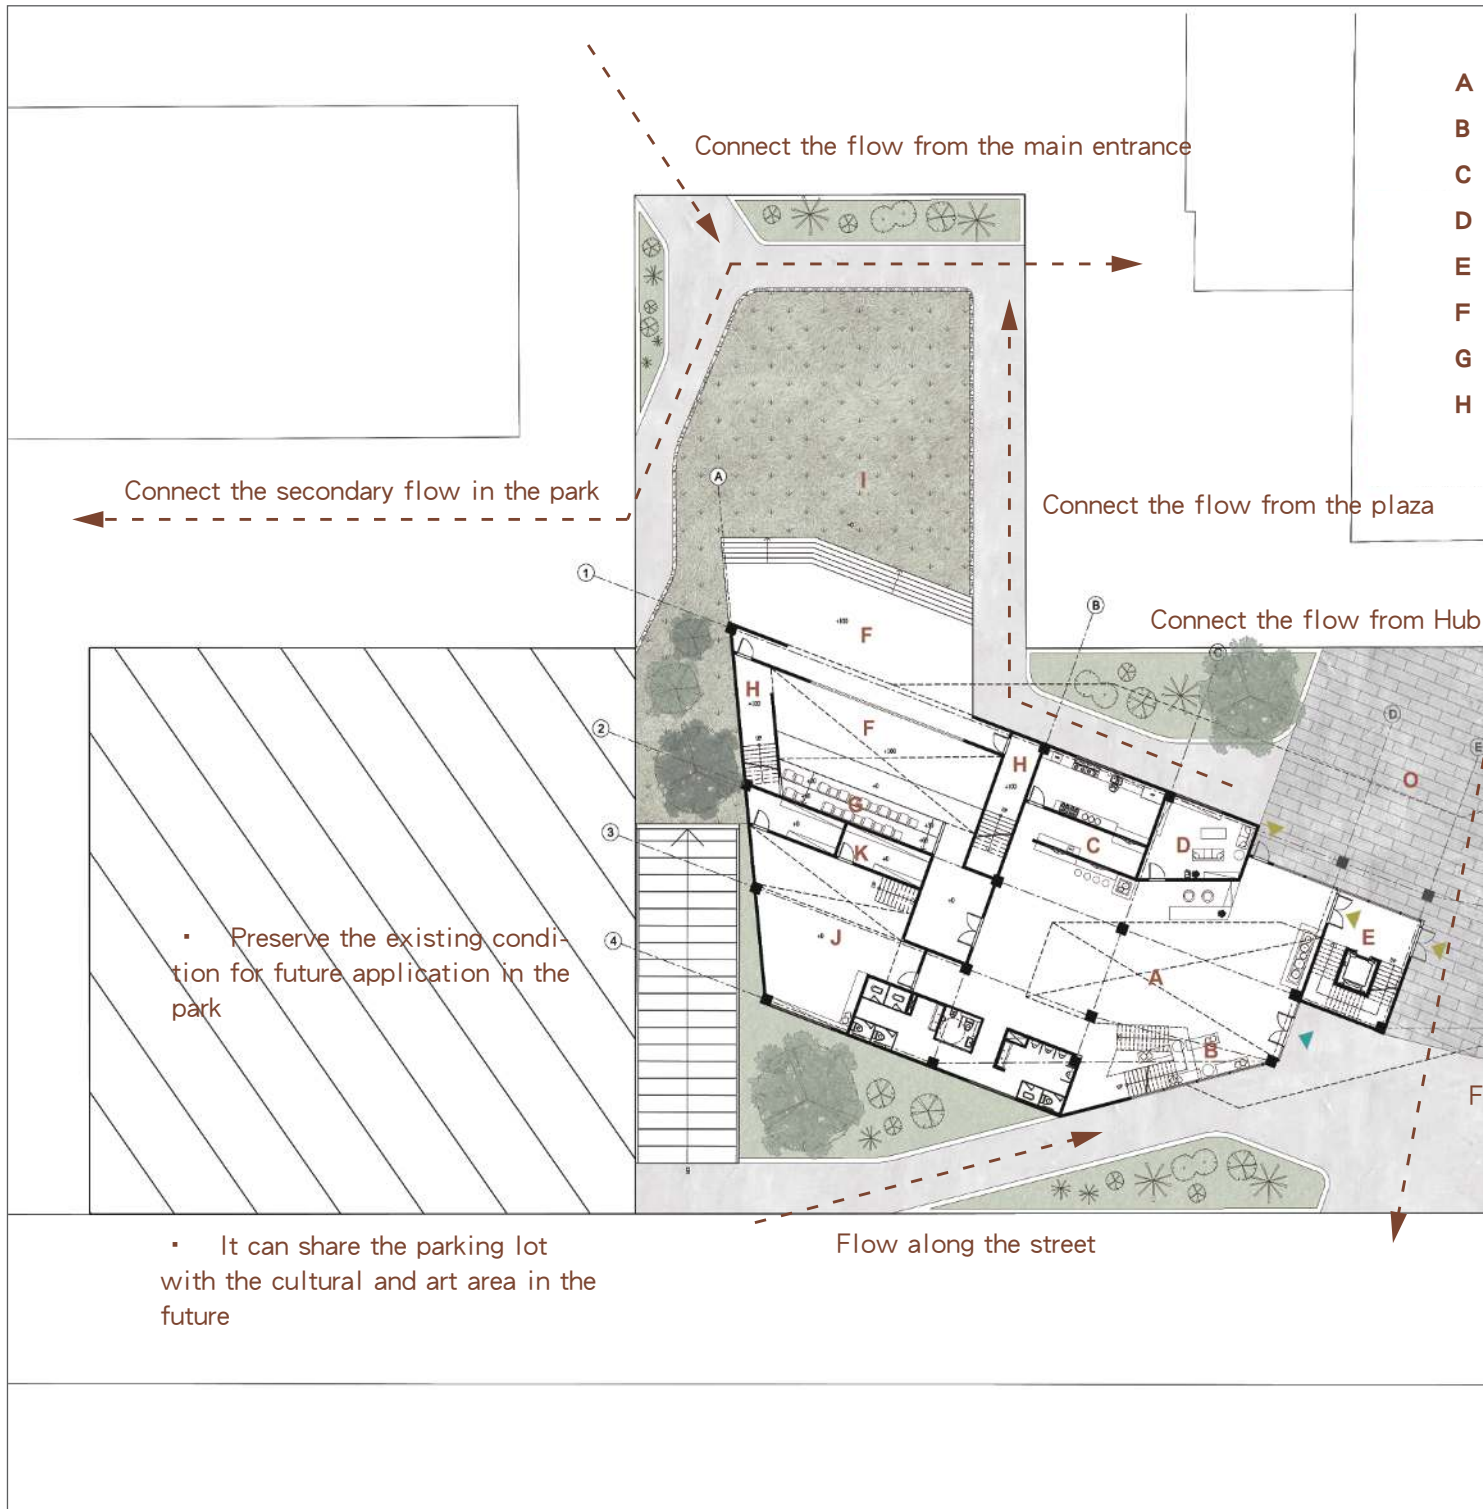

Fuction

It is divided into four spatial functions, namely dining, terrace, plaza, and theater

Floor plan - 1F

Massing development

Three major spatial structures: theater, ancillary spaces, and restaurant

- Overlap and form intersection
- Clearly categorize functions to manage the density of traffic flow

Penetrate and setback the mass

- Penetrating the mass to connect Hub with traffic flow along the street."
- Setback to form plaza, lawn and connect flow from all direction
- Intergration between each structures

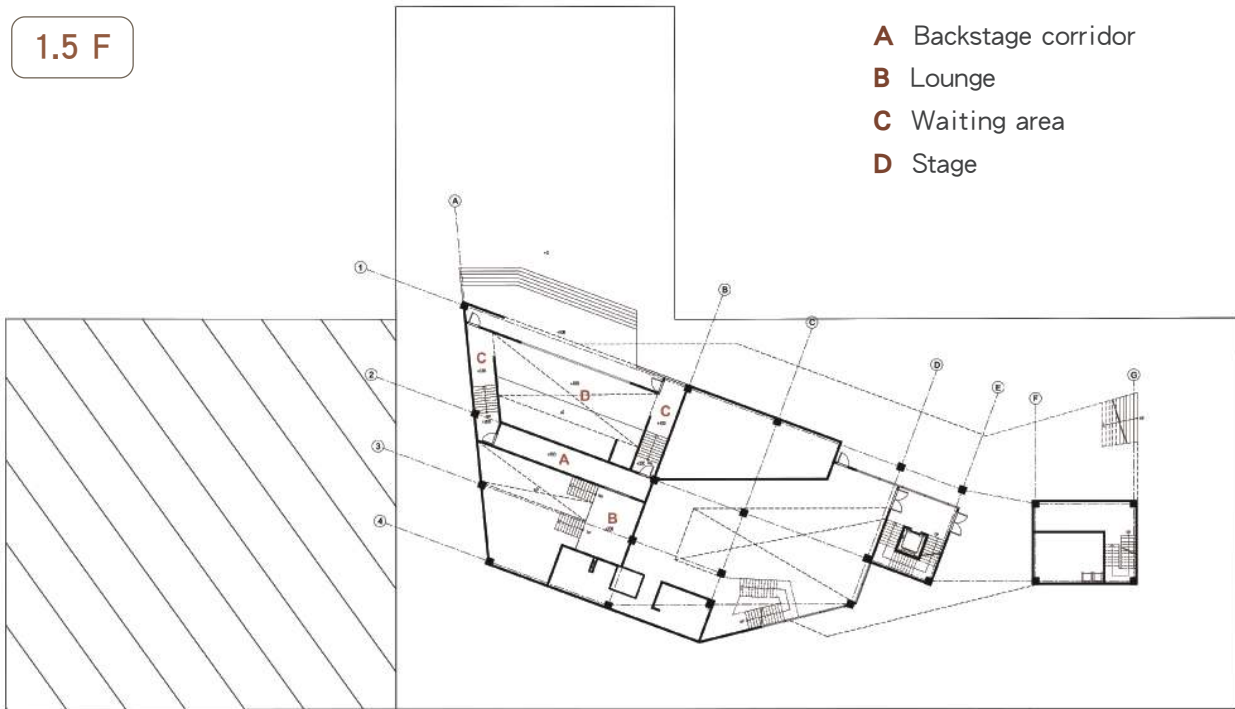

Outdoor staircase connecting terrace

- Creating the flow to experience the space
- Guiding the main flow to the terrace and form the diverge flow
- Creating spaces for watching performances and dining

Floor plan

1.5 F

- B** Lounge
- C** Waiting area
- D** Stage

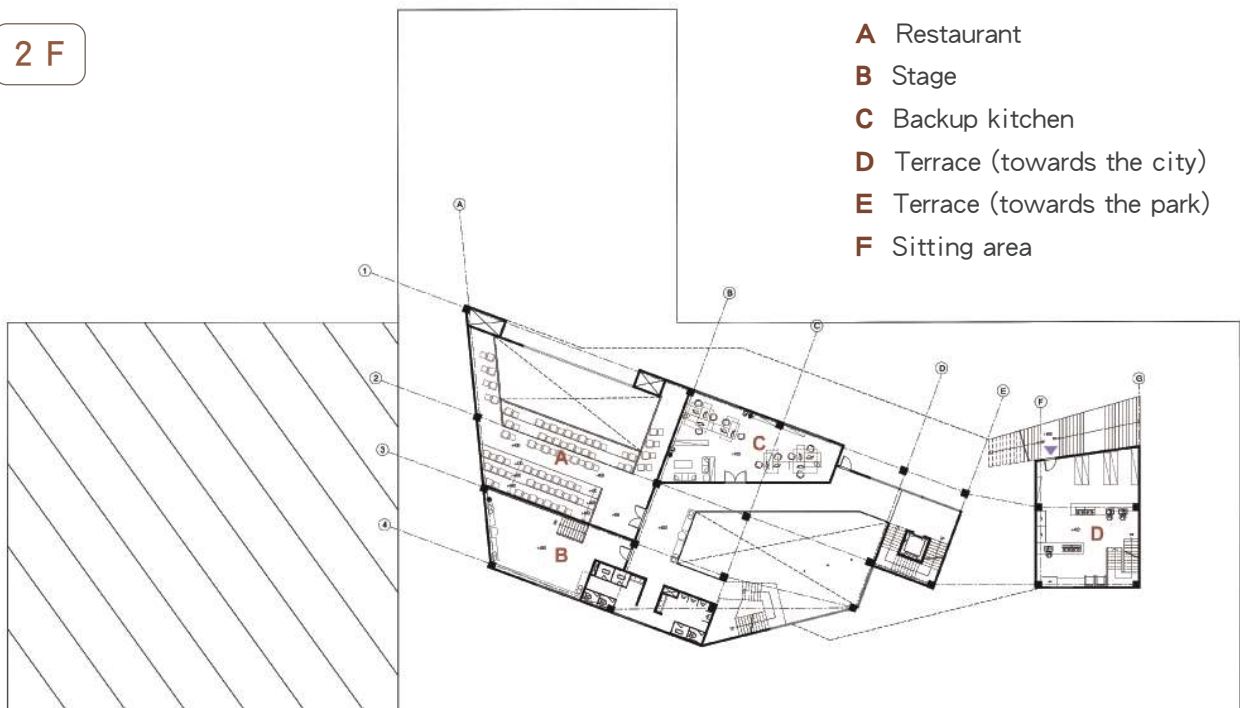

1.5 Floor

2 F

- A** Restaurant
- B** Stage
- C** Backup kitchen
- D** Terrace (towards the city)
- E** Terrace (towards the park)
- F** Sitting area

2nd Floor

Sound 1 1F Open Air Theater

Activity : Picnic / Open air bar / Holiday market / Music festival

Feature :

- Ideal for good weather in Taichung
- Triple interaction, highly flexible space (internally, externally, and towards the plaza)
- Plaza shaped by the intersection of the flow
- The main building isolates the urban sounds from the street
- It can be connected with the cultural and art area in the future

Sound 2 1-3F Inside the theater

Activity : Opening theater - Comfortable seating / individual dining table

Feature :

- The stage forms interface space between interior and exterior, and the opening range can be determined based on the performance format
- Performance can extend to seating areas or lawn beyond the stage
- Create a unique and comfortable experience different from conventional theaters

Sound 3 1F Plaza

Activity : It serves as a dining space for takeout customers. Guests can also sit on along the flowerbed, enjoying their meal while watching performances under Hub or beside the lawn.

Feature :

- Guide and gather the flow
- Two-way viewing plaza

Sound 4 2 — 3F Dinner theater

Activity : Enjoying performances while dining in the restaurant

Feature :

- Providing completed dinning function just like a restaurant
- Divided into upper and lower levels for viewing performances
- Skylights above the stage area create natural lighting during the day
- All seats are designed to face towards the stage

Sound 4 3 F Terrace

Activity : Enjoying performances under Hub and on the lawn on the terrace (with bar tables and sitting area along the edge of terrace)

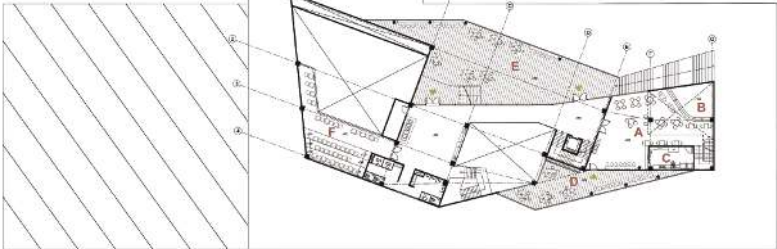

Feature :

- Guide and gather the flow
- Two-way viewing plaza

WANDERING

BUT NOT

LOST.

It is believed that natural and the interaction between people may soften the busy atmosphere of traffic or technology. So I got an idea of the bridge which may connect different functions together. As the river flow through the green belt, I want people to wander through the green belt but in a clear and logical way which won't make them get lost. Besides, having a chance to walk out may also become a chance to inspire the thought or slow down the lives.

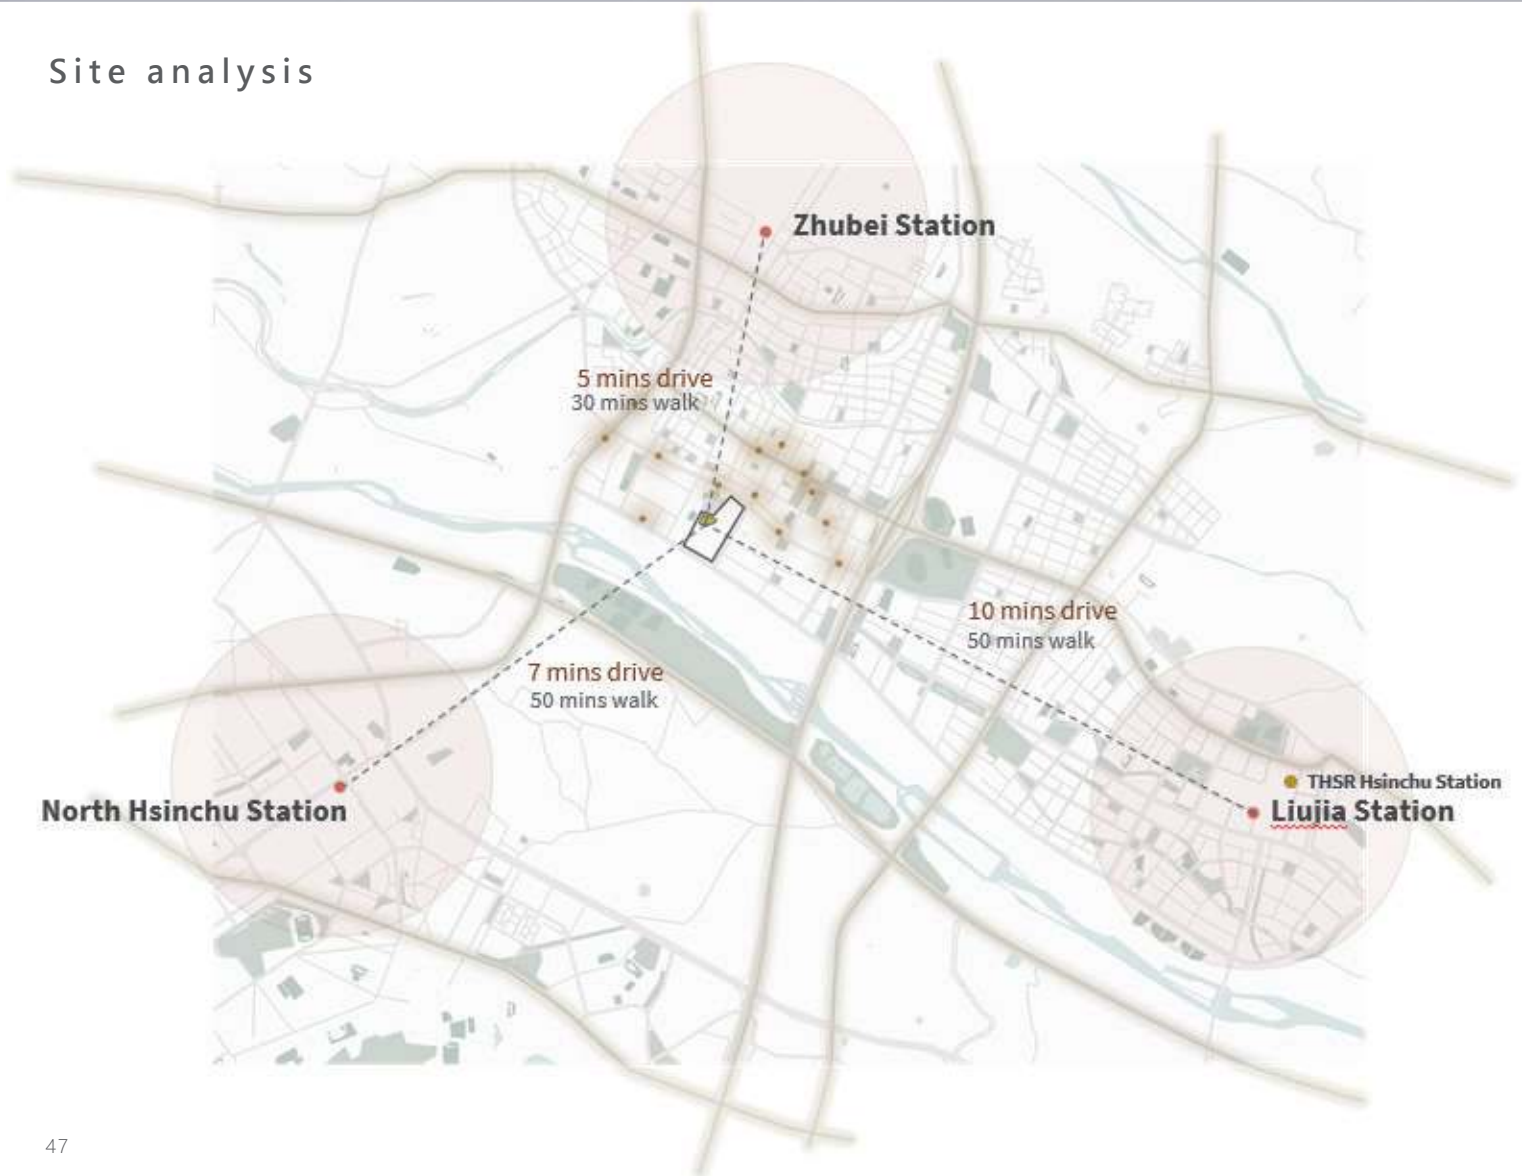

WANDERING

BUT NOT

LOST.

Site analysis

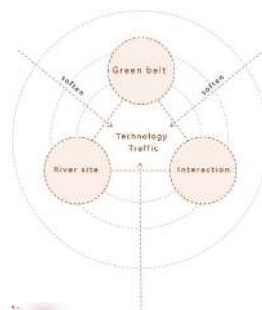

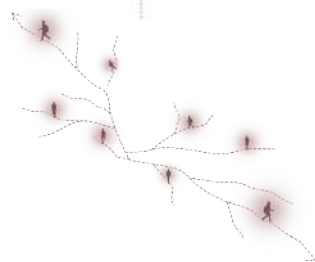

1. ■ Traffic bridge between Hsinchu and Zhubei
■ Connect science and technology institutions
2. ■ Connection between natural and technology
■ Develop into an area for leisure and interaction
3. ■ Railway linking North Hsinchu and Zhubei
4. ■ Way to Industrial Technology Research Institute

- Main road
- Bus stop
- TSHR Hsinchu station
- Train station

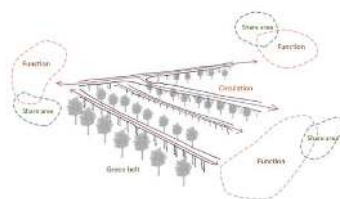

Concept

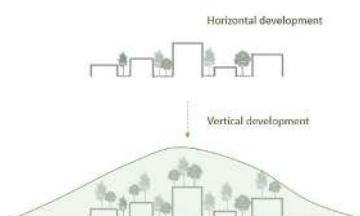

■ **Soften technology & traffic** within green belt, interaction, and riverside

■ **Wandering** in the pathway through the entire circulation system

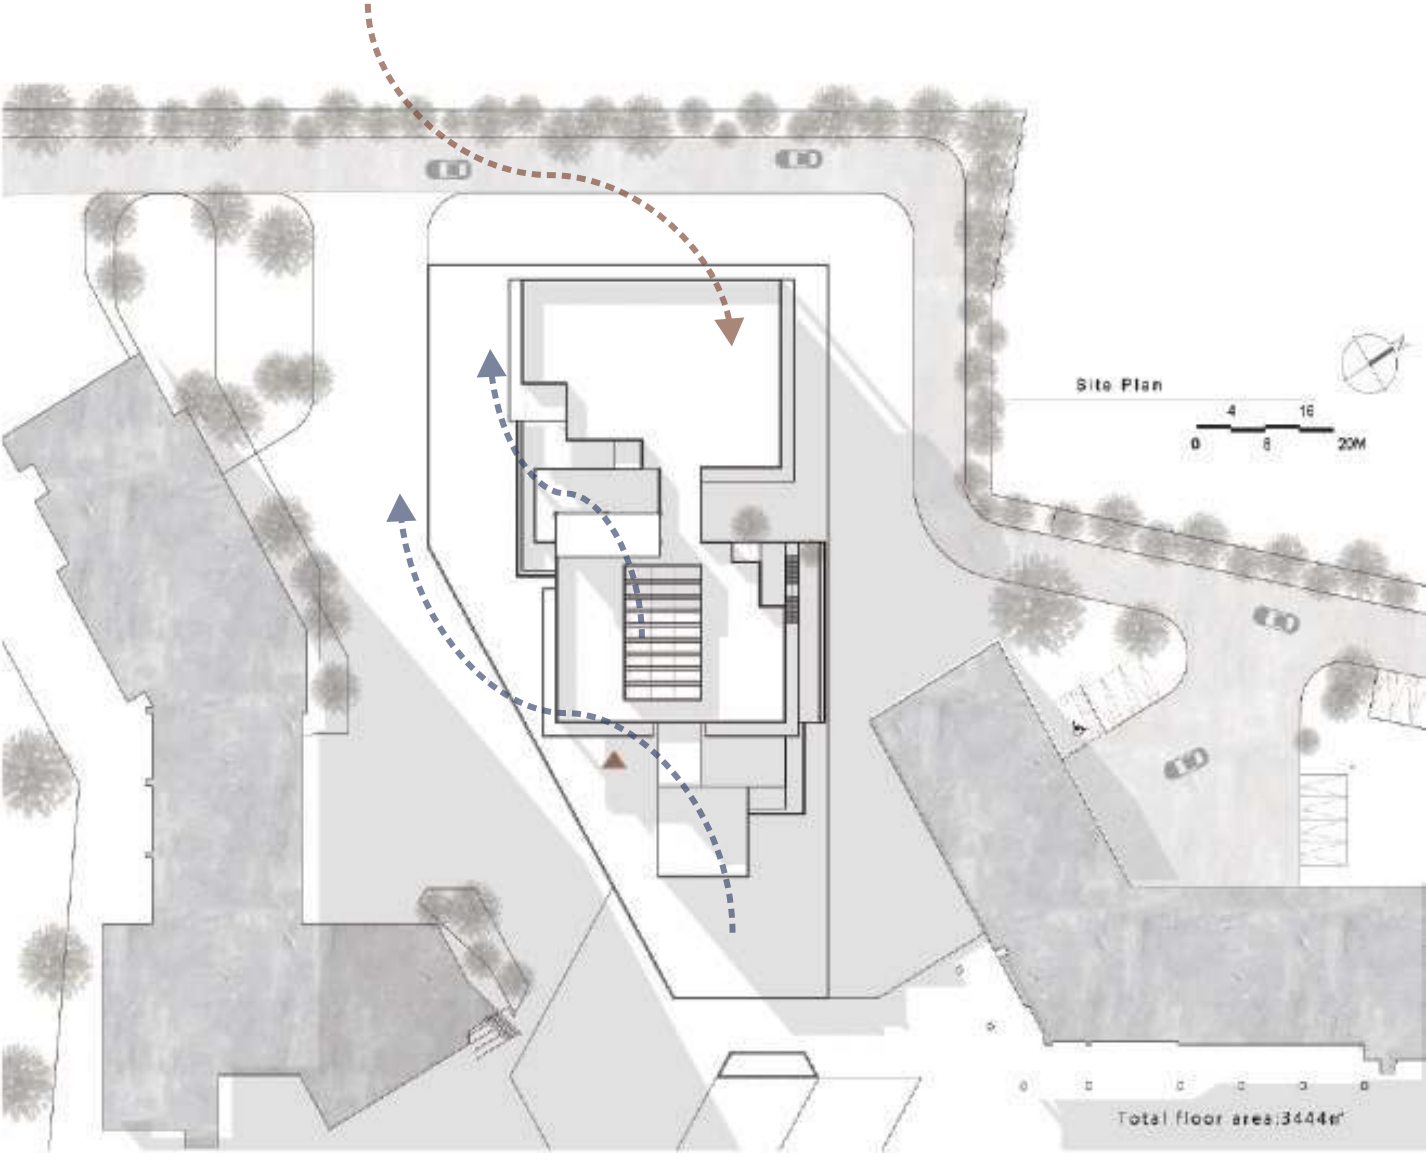

■ **Bridges along with green belt** just as the traffic bridges between Hsinchu and Zhubei, to connect the functions and share areas altogether

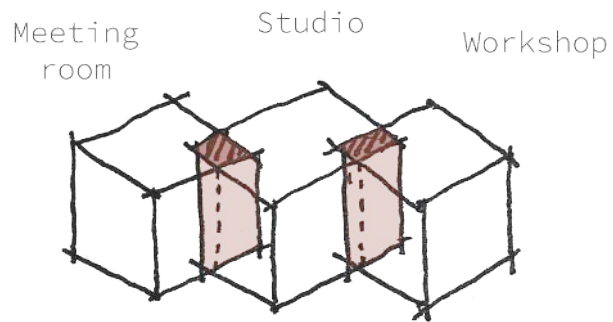

■ **Green belt development** not only develop in horizontal way, but also vertical way

Site plan

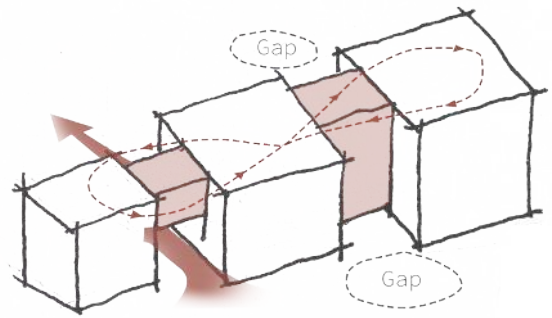

■ Total area : 3444 square meter.
The main entrance is facing the central area and follow the site line.

Massing development

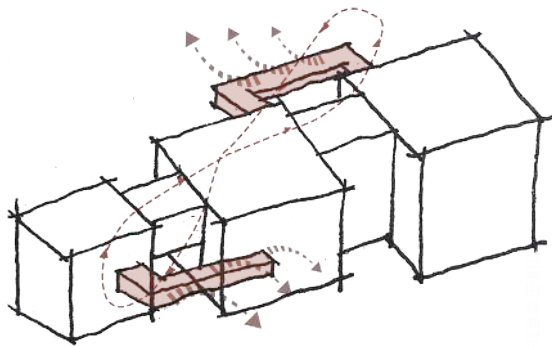

3-blocks geometry

- Make up with three systems
- Generates connective spaces

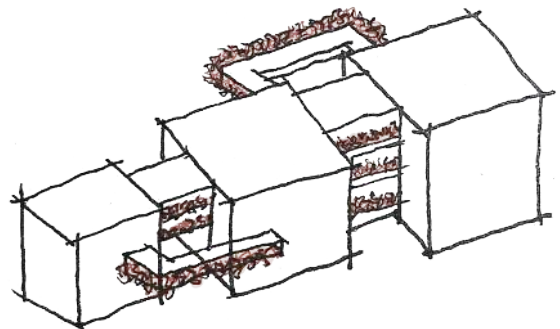

Bridge connection between the blocks

- Build up traffic flow between each space
- People may wandering around the spaces

Bridge connection between the blocks

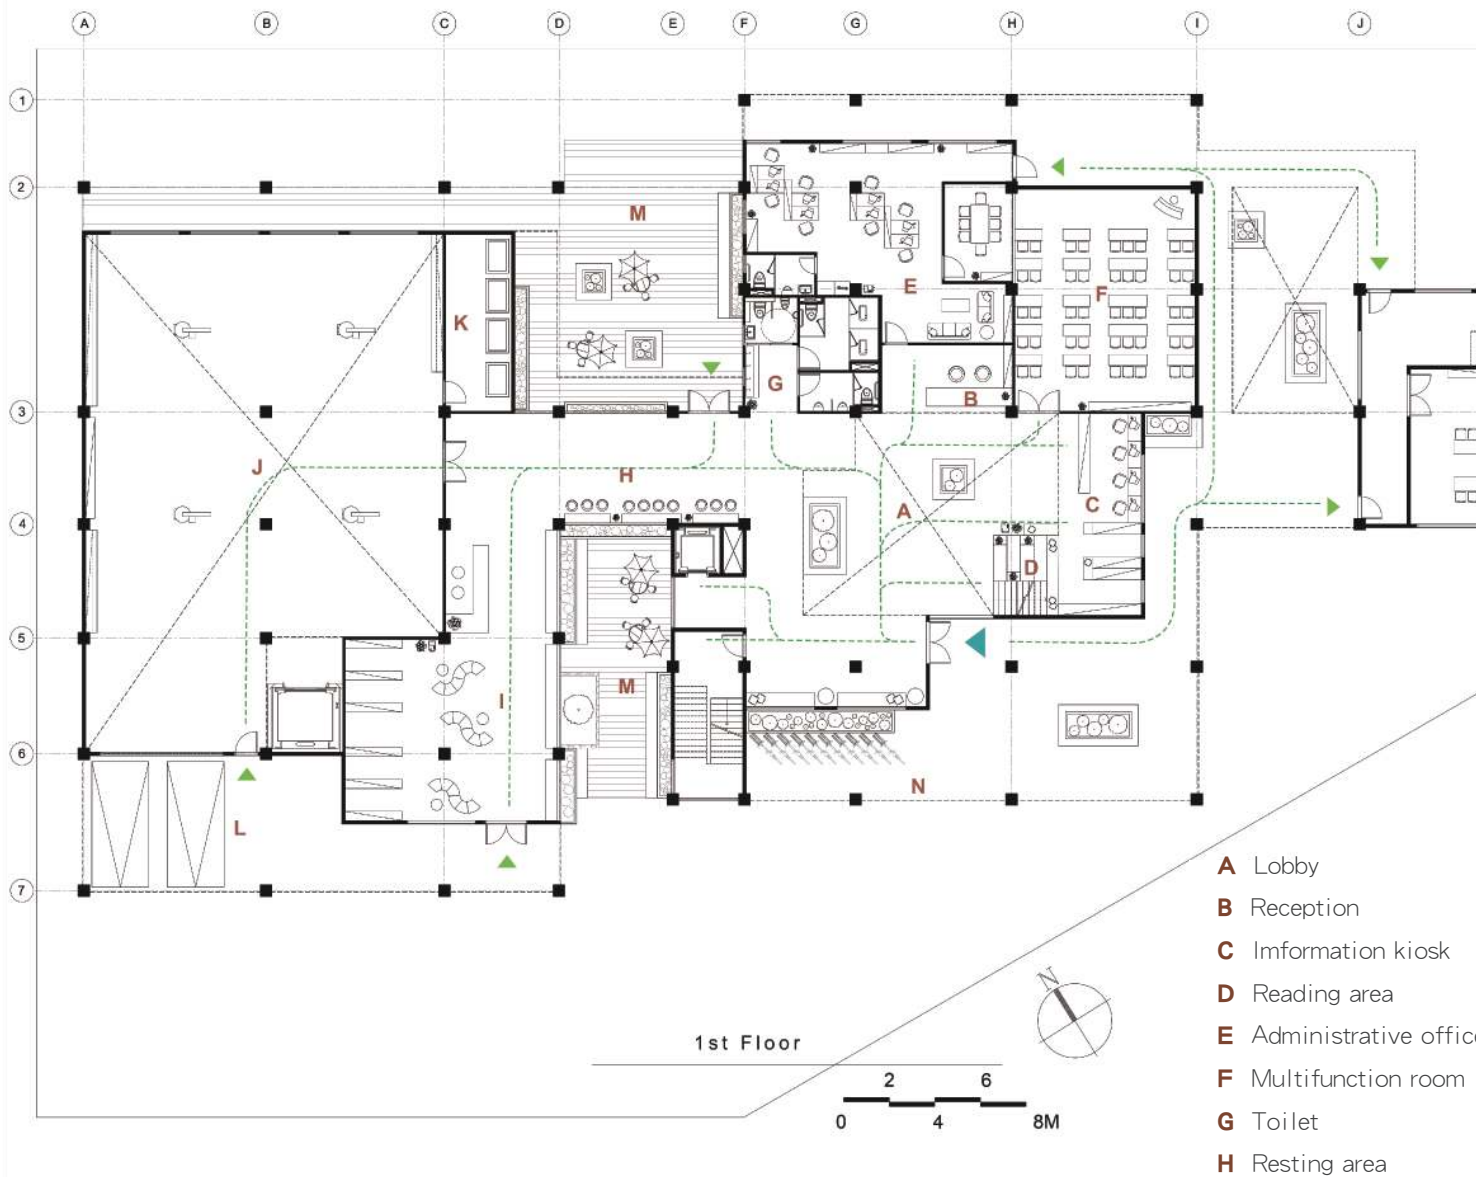

- Generate gaps to make people interact with each others
- Make a connection with AICC & IA

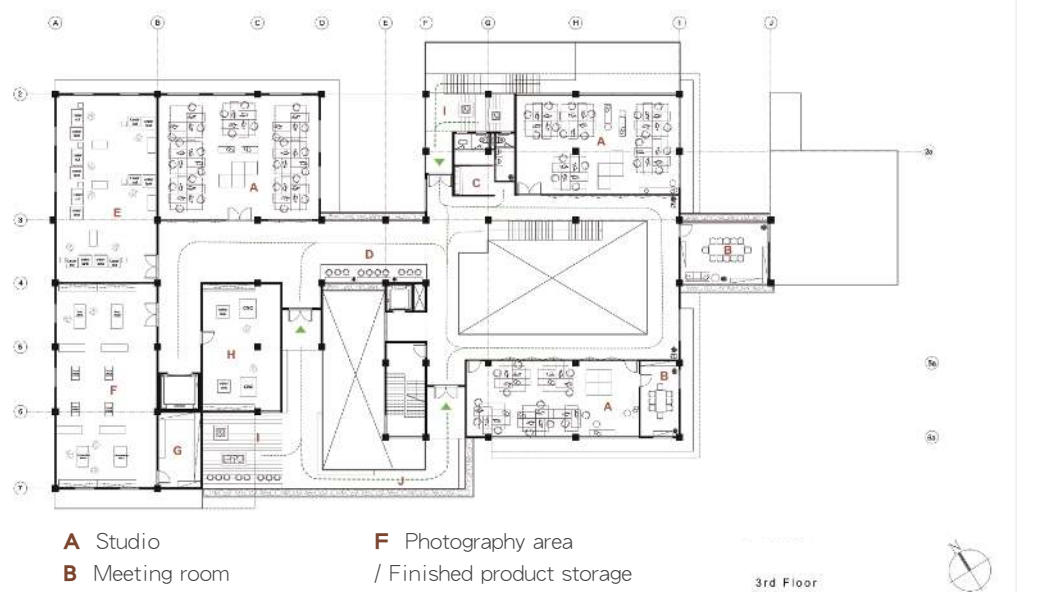

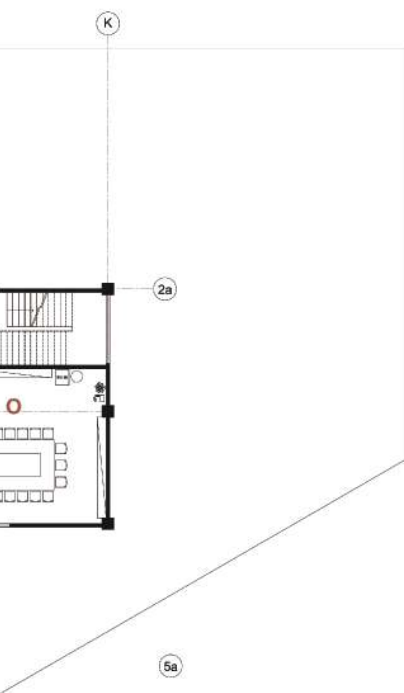

Green belts along the bridges

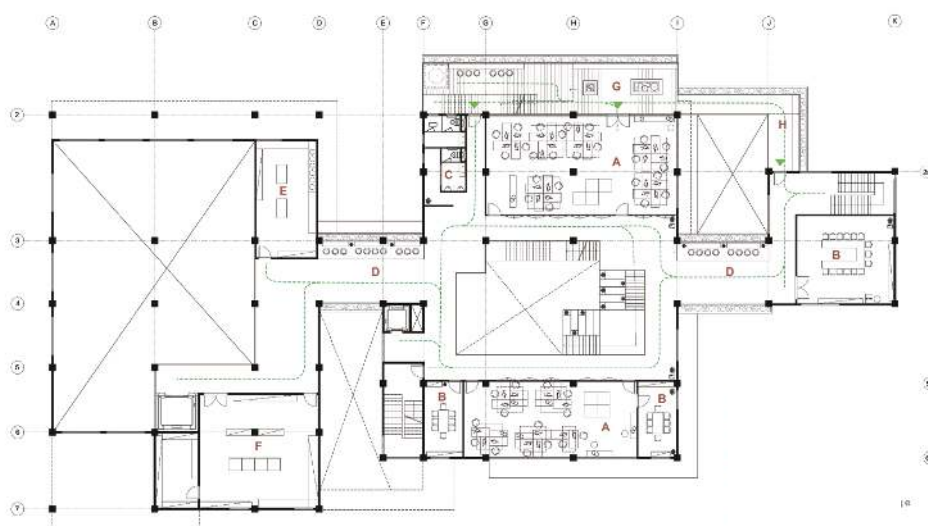

- Lead the movement of people
- Soften the busy atmosphere

Floor plan

- A** Studio
- B** Meeting room
- C** Toilet
- D** Resting area
- E** 3D printer room
- F** Photography area / Finished product storage
- G** Terrace
- H** Bridge

Hydrological Exhibition Center

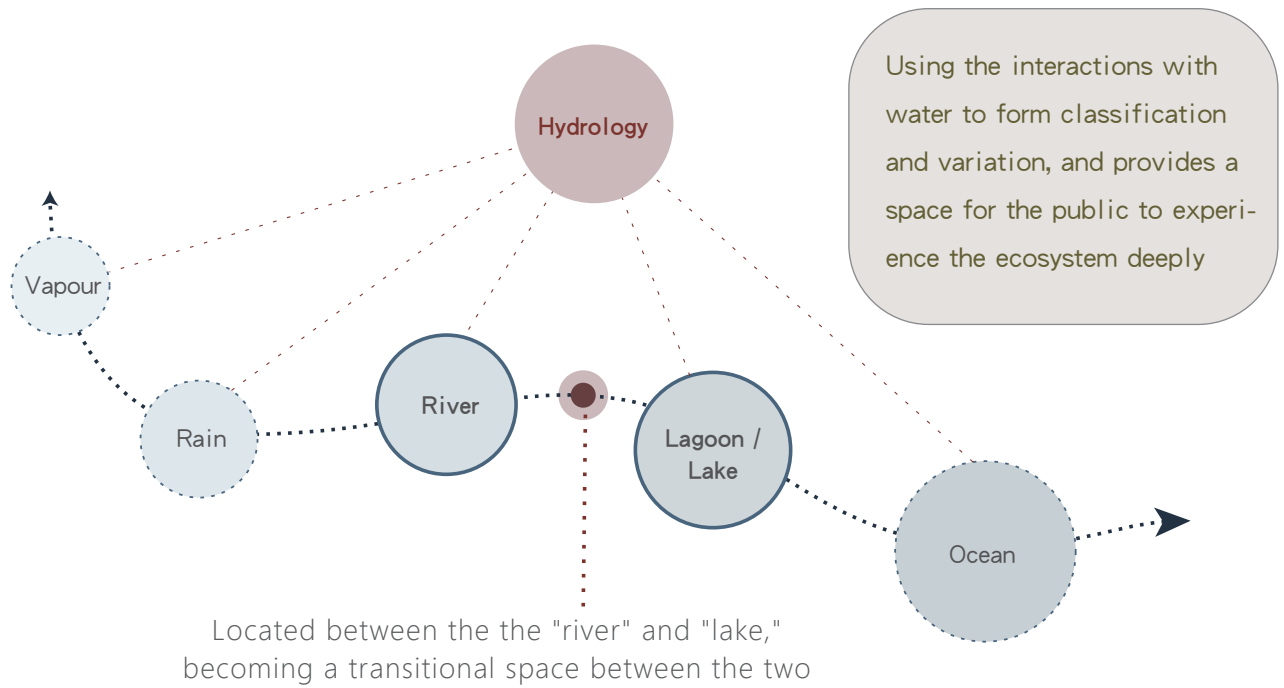

In this design, the site will be defined as an exhibition center closely linked to "hydrology." Located between the "river" and "lake," the site becomes a transitional space between the two, using the interactions with water to form classification and variation, and provides a space for the public to experience the ecosystem deeply. Also, the river system will be brought into the site along with the traffic flow, creating an interconnected water space between the indoor and outdoor areas. Additionally, it shapes a central water plaza and a water stage to gather people and leverage the landscape advantages to interact with the river and lake. Eventually, we hope to strengthen the connection between people and hydrology within this space, as well as to raise awareness of the significance of the hydrological ecology in this site, combining landscape, performance, and water to evoke a unique resonance.

Bamboo Forest Iron Cenozoic Exhibition

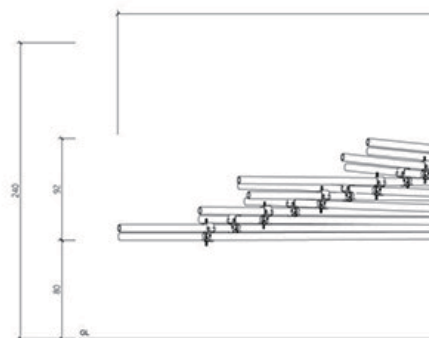

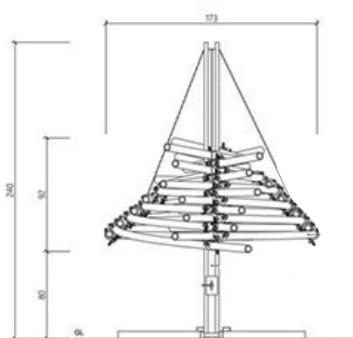

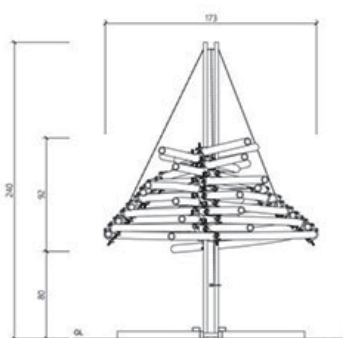

/ TeamWork

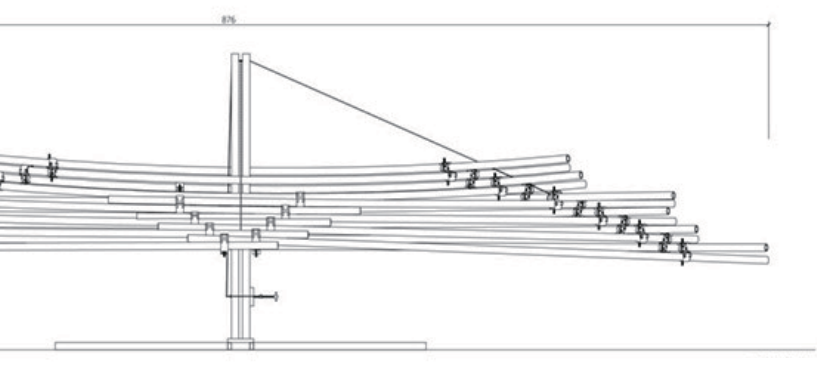

構 竹 浮 雲

Starting with the exploration of "modern bamboo structures," we seek suitable construction methods and industrial components to show the unique working properties and mechanics of bamboo, aiming to present the inherent nature of "bamboo" found in nature. The envisioned experience of modern bamboo structures is akin to passengers riding the Alishan Forest Railway, swaying gently back and forth, gradually ascending without realizing, into the misty peaks of the mountains.

The bamboo structures, having undergone baking and bending, suspend in the air with a streamlined form and unfinished edges, creating a blurred reflection of the patterns of birds, swimming fish, and drifting clouds in the mountains and forests. Metal buckles secure the bamboo structures, arranged in the unique "之" character pattern, depicting the path of the mountains.
